

Configuring Sharp MFPs for FTP scanning (For older style web interface)

Configuring the MFP for FTP scanning

Log in to the Sharp Imager's web interface home page by typing the IP address of your imager using a web browser such as Internet Explorer.

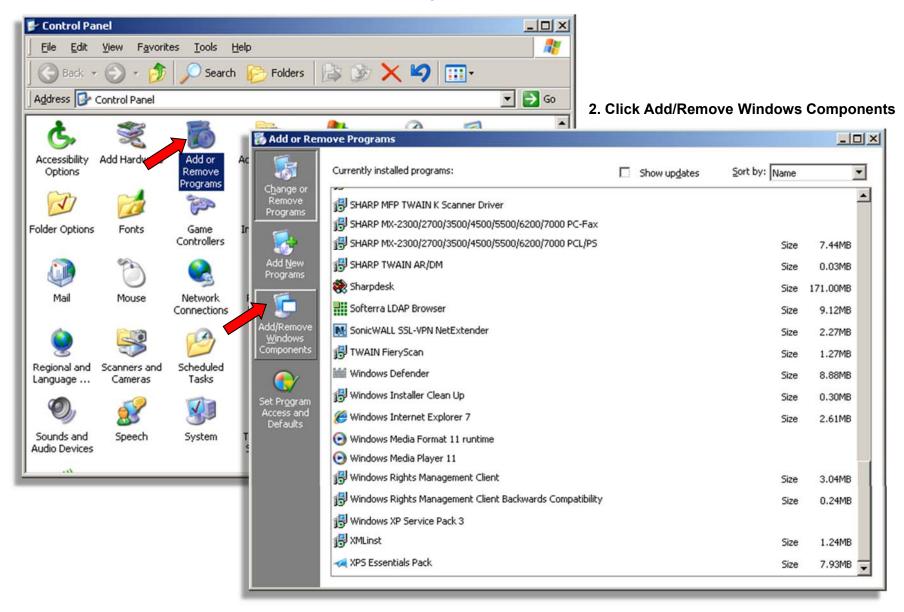

- 1. Click the FTP link
- 2. Enter the Name (Required). Note: This will be the display name
- 3. Enter the IP address or Hostname (computer name) of the computer that is running the FTP service
- 4. User Name: This is optional for added security. If used be sure to give it full security rights. Sharing rights are not used.
- 5. Password: If a User Name is used, enter the password (case sensitive)
- 6. If the FTP site is the default home directory, **no** Directory is needed. If it is a virtual directory, be sure to include the directory name **without a slash** in front.
- 7. Click the Submit button

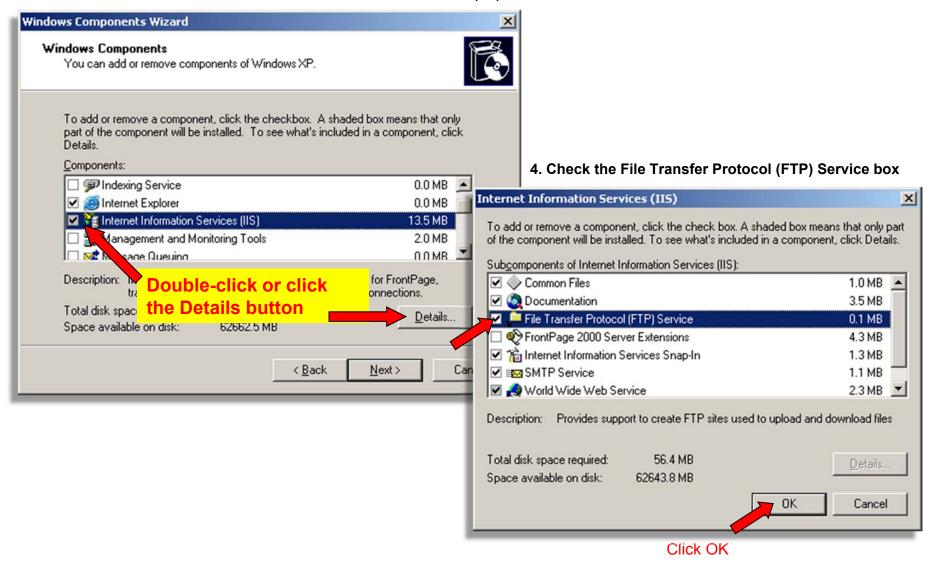

Installing FTP services

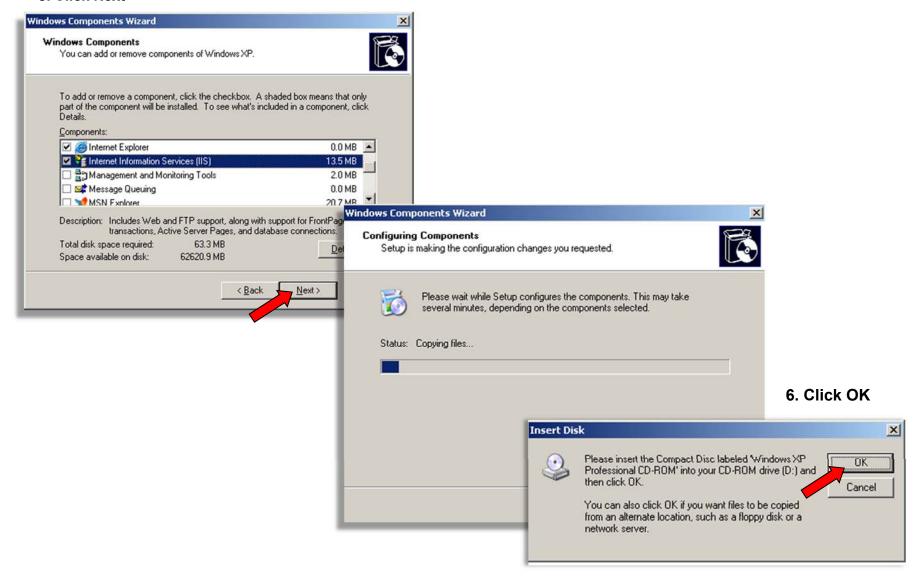

1. In the Control Panel: Double-Click Add or Remove Programs

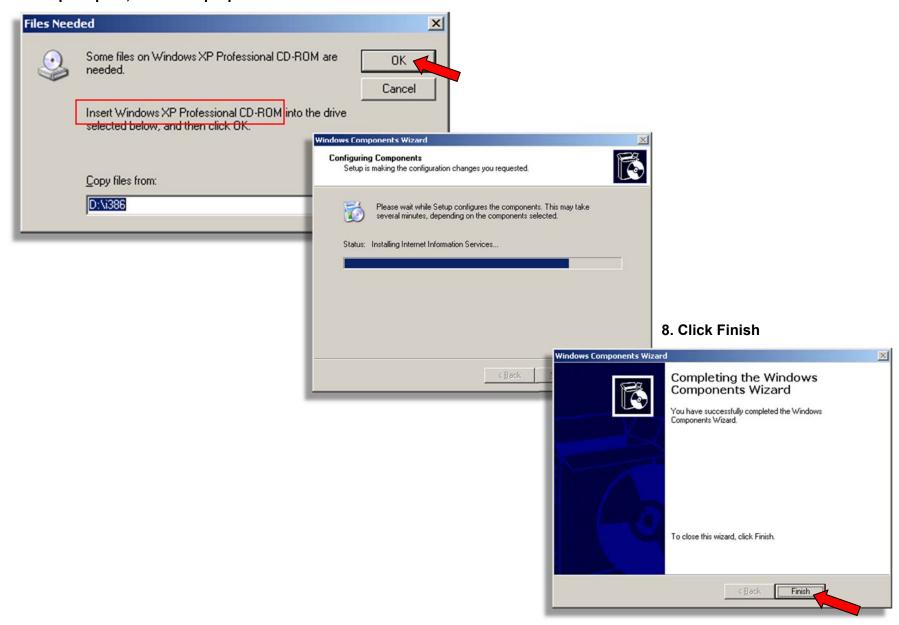

3. Check the box and double-click Internet Information Services (IIS)

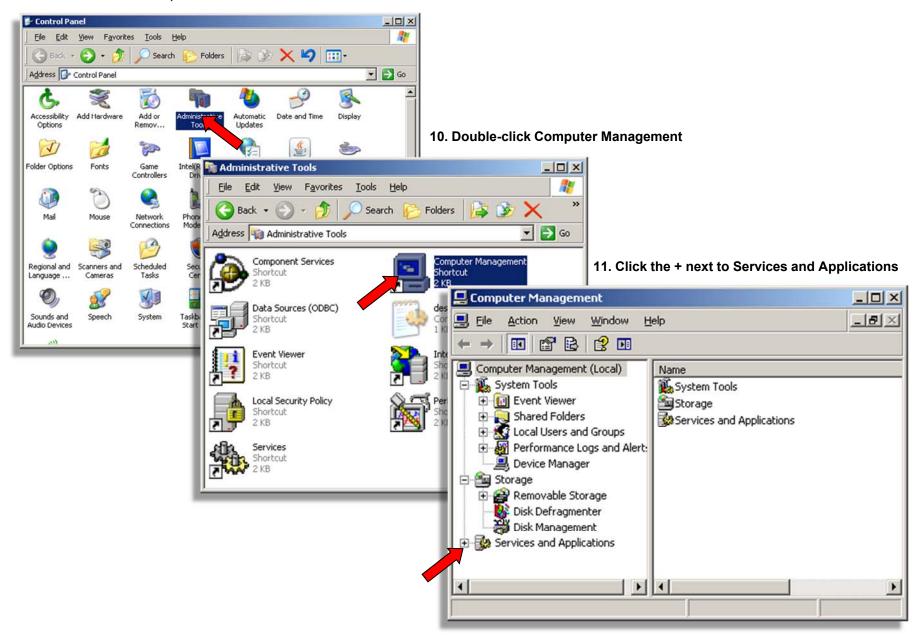

5. Click Next

7. If prompted, insert the proper Windows CD-ROM and click OK

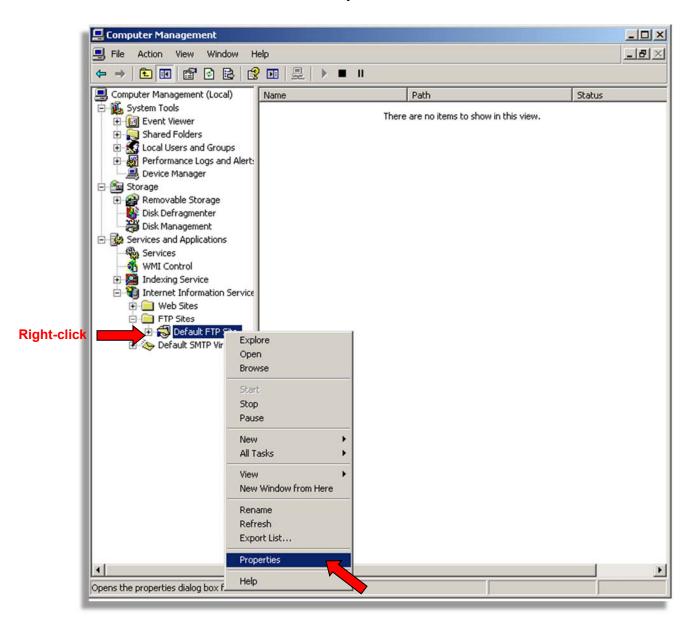

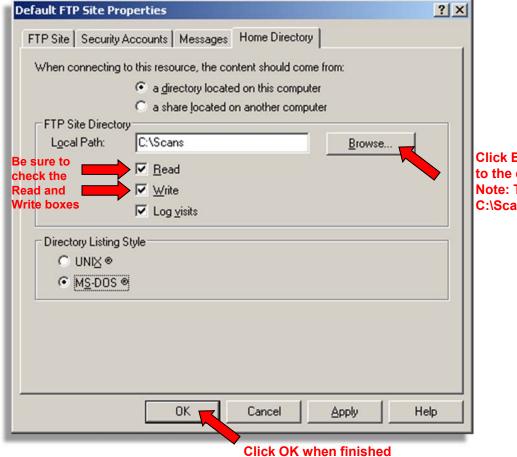

9. In the Control Panel, double-click Administrative Tools

Configuring FTP services (First time setup)

Follow these instructions if you enabled FTP for the first time.

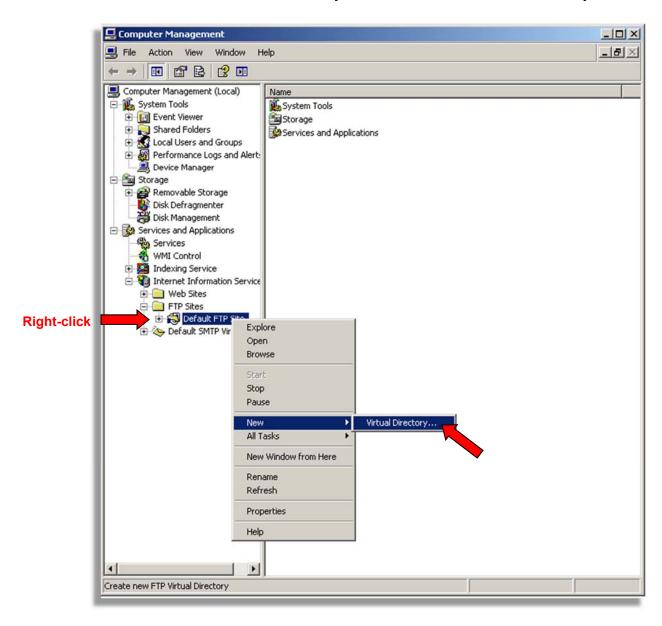

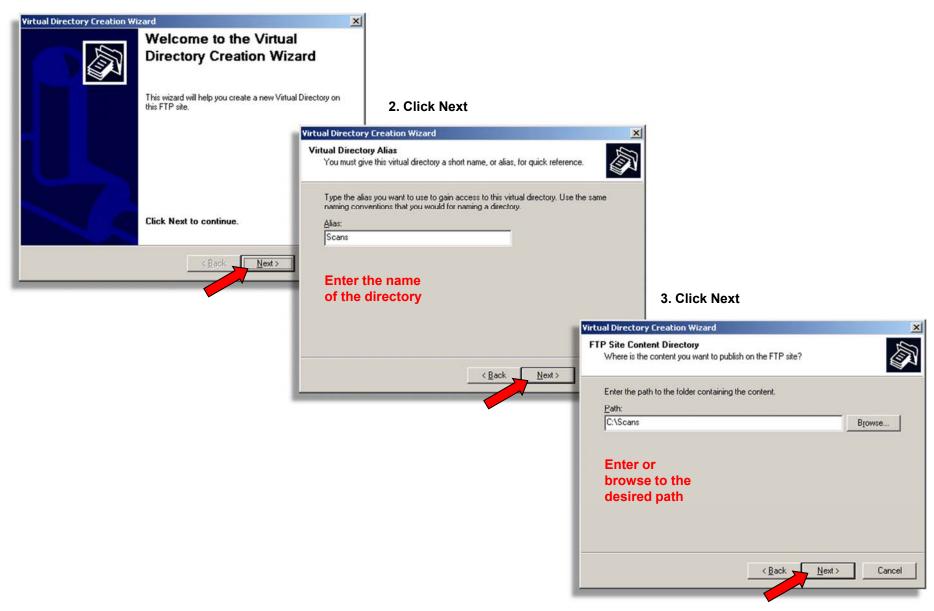

Click Browse... and point to the desired folder.
Note: This image shows
C:\Scans as an example.

Creating FTP services Virtual Directory (If default FTP site already exists)

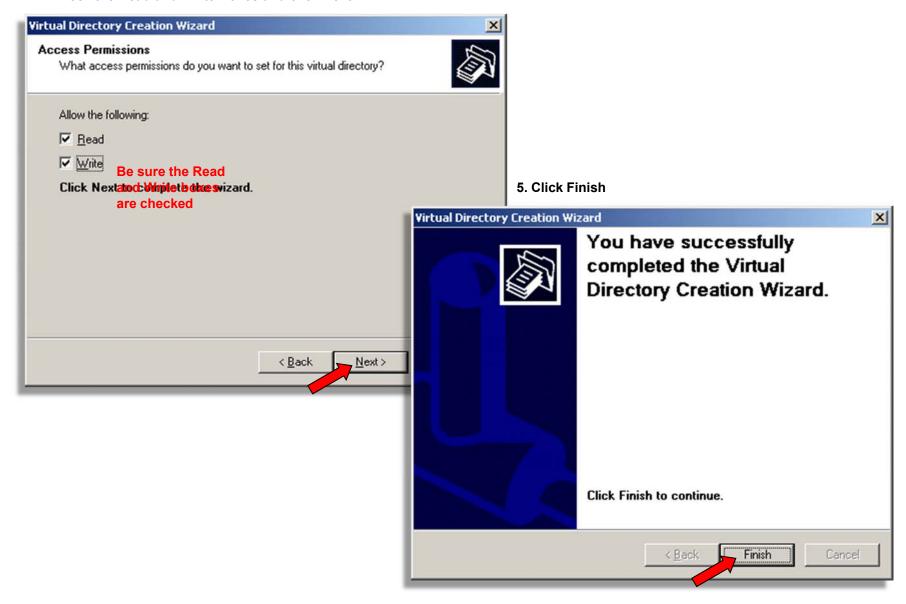

Follow these instructions if you have a Default FTP Site already.

1. Click Next

4. Check the Read and Write Boxes and click Next

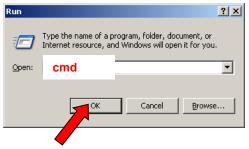

Troubleshooting scan to FTP (CE-04 errors)

Step

1. Click Start > Run

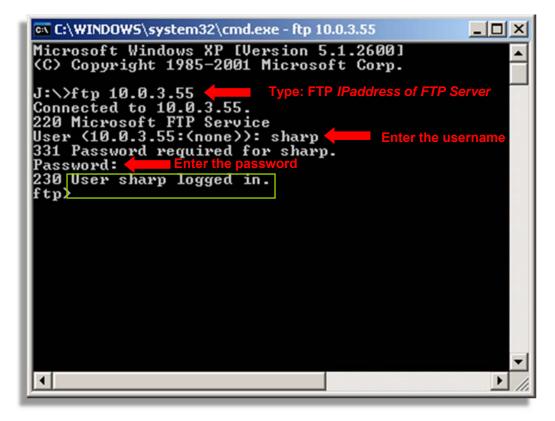

2. Type: cmd and click OK

- 3. Type: ftp *ipaddress* (IP address of FTP services hosting computer) > Enter
- 4. Type: username > Enter
- 5. Type: password > Enter
- 6. Type: bye > Enter (to exit when finished)

Note: The results should look similar to the screen below. If the results are different, you may have an incorrect username or password and will need to correct that and repeat these steps again until the results are positive.

Troubleshooting scan to FTP (CE-02 & CE-05 errors)

- 1. Enter the IP address or Hostname (computer name) of the computer that is running the FTP service
- 2. If the FTP site is the default home directory, NO Directory is needed. If it is a virtual directory, be sure to include the directory name without a slash in front.
