

## Setting Up Sharp MX MFPs For Inbound Fax Routing

August 21, 2009

**Note:** [You will need the IP address of your Sharp MFP.](#)

This tutorial shows how to [Set Up Inbound Fax Routing](#) on MX series MFPs. The Sharp MFP can be setup to route to one or more email destinations or a network folder. The first generation of MX imagers forward the fax image as a TIFF. The second generation forward the fax image as a TIFF or PDF. The MX imagers can be setup to forward all faxes to email/network folder or print them and forward them. This is done by choosing Print All or Print Error Only.

**Note:** The following models have a different web interface: MX-M350, MX-M450, MX-M550, MX-M620, MX-M700. It is set up similarly. Click Inbound Routing Settings on the web interface.
