

Machine Print Spool Locks Up When Printing Vector Graphics

August 5, 2015

Sharp Technical Tip 080415_1

Models: AR-M350N/AR-M450N

Symptom: When printing an Adobe® PDF file, the machine would print about four pages and then lockup indicating, "Rendering."

Cause: Driver is set for printing vector graphics.

Solution: In the print driver, under the Advanced Tab, select "raster" from the drop-down list. This allows the printer to print the file without decrypting the vector graphics.
